Skanska USA Taps Macks as Healthcare Account Manager

Brings 16 years of experience in healthcare construction to Rockville office

Rockville, M.D. – Skanska USA announced today that its building business unit, which is a leading provider of construction management, preconstruction, and design-build services, has hired Jennifer Macks as vice president and new healthcare account manager for its Rockville office, which serves clients in the Greater Washington, D.C., Baltimore and Northern Virginia areas.

In her new role at Skanska, Macks will utilize her more than 16 years of experience in construction and in the planning and administration of healthcare projects to create new business opportunities in and around the greater D.C. metro area. She will also be responsible for overseeing all Skanska healthcare construction projects in the region.

As a leader in both healthcare construction and sustainable building practices, Skanska is considered one of the most green-focused healthcare builders in the country. The firm built the nation's first LEED Gold Certified hospital – Providence Newberg Medical Center in Newberg, Oregon and recently completed the fourth – Shands Cancer Hospital in Gainesville, FL. Skanska has roughly \$1 billion in healthcare projects currently under construction in the U.S.

“Healthcare construction continues to remain very active in this region, and we are bringing in highly qualified, experienced people to help reinforce our commitment to the local healthcare construction market,” said Chuck Brawley, executive vice president and general manager of Skanska USA’s Rockville office. “Jennifer’s wealth of expertise working on some of the most complex construction and renovation projects in this sector will ensure that she will be a valuable asset to our firm and will help expand our growing healthcare practice in the greater D.C. area.”

Macks’ construction experience has included working on a variety of healthcare projects, including replacement hospitals, bed towers, surgical suites, radiology, cardiology, children’s programs and emergency departments. Her projects have been both new construction and renovations on busy, logistically challenging sites.

Prior to joining Skanska, Macks worked as the project director for the Barton Malow Company where she oversaw local major healthcare and design-build projects, including preconstruction services to improve the Inova Fairfax Hospital in Virginia, a multi-phase expansion and renovation project at the University of Maryland’s General Hospital in Baltimore and the historical renovation of the US Naval Academy King Hall Galley.

Macks is a licensed professional engineer, a LEED Accredited Professional and is a member of the American Society of Civil Engineers and the Greater Washington Board of Trade. She is also the president of the University of Michigan Civil Engineering Friends and Alumni Association.

Macks received her Bachelor of Science in Civil and Environment Engineering from the University of Michigan and earned her Master's of Business Administration (MBA) from Wayne State University in Michigan.
